

PERFORMANCE BOOST

Siemens TIA Portal Backups Faster than Ever

Increased compare performance on average 8 times

On average jobs duration is 16 times faster than before

Allows to significantly increase the execution of TIA Portal backup jobs for every server/agent

Why the performance of TIA Portal backup jobs counts:

- 1. Importance of TIA Portal across different industries:** According to an AUVESY-MDT survey, Siemens TIA Portal was ranked as the top editor in industrial automation by respondents from various industries.
- 2. Time savings enables closer monitoring:** Being able to save time and resources on the server and agents enables a even closer monitoring of the automation devices or a significant increased number of monitored devices per agent/server.
- 3. Fulfill legal obligations:** No backups are not an option for many manufacturers and on complex shopfloors manual project backups become increasingly unrealistic and are uncompliant with guidelines for critical infrastructures or NIS2.
